

⑥ \$ 357 total

$$\begin{array}{r} 2-100 = 200 \$ \\ 14-10 = 140 \$ \\ 48-1 = \underline{48} \\ \hline 388 \end{array}$$

⑥a $(2 \times 100) + (14 \times 10) + (48 \times 1) = x$

⑥b - too much $388 - 357 = 31 \$$ too much

⑦ Perimeter: $10 + 4 + 5 + 5 + 5 + 10 + 14 + 5 = \boxed{58 \text{ ft}}$

Bonus

① $13 - 3 \div 3 =$

$13 - 1 = \boxed{12}$

② $10^4 \times 5 = \boxed{50,000}$
 $(1,000) \times 5$

③ $\boxed{24 \text{ in}^3}$

(1a) 3,000

(1c) 36,000

(1b) 2,100

(1d) 48,000

(2a) 2,548

(2b) 322

(3)

$$K = 49$$

$$G = 49 \times 2 = 98$$

$$H = (K + G) \times 2 =$$

$$(49 + 98)$$

$$\downarrow$$

$$147 \times 2 =$$

294 minutes

Est: $50 + 100 = 150 \times 2 =$
about 300 min.

(4a)

L	M
1	1,000
5	5,000
11	11,000
23	23,000

(4b)

For every 1 L that equal 1,000 mL, mill = 1,000, therefore if you have 5 L, you mult. by 1,000 to get 5,000.

5a

Kilograms	Gram (g)
3	3,000
8	8,000
13	13,000
27	27,000

(5b)

horse to fly you multiply. For every 1 kilogram that equals 1,000 grams. Therefore 8 kilograms is $8 \times 1,000 = 8,000$ grams
